Portable, Tough, Reliable

Rugged Computer Keyboards Engineered For Use in Mobile Environments

With 28 years of experience, iKey® is the leader in rugged peripherals built specifically for mobile usage. Whether integrated into a patrol car, helicopter or mobile command center, iKey's products are designed for the needs of today's officer.

iKey's line of mobile products includes keyboards and mobile displays that can withstand the vibration, extreme temperatures, and spills associated with in-vehicle computing.

iKey's keyboards feature fully sealed, laser-etched keys that are resistant to dirt, liquids and the elements, and will not wear with heavy usage. In addition, many of iKey's keyboards have integrated touchpads that are designed for gloved use, red LED backlit keys, and optional NVIS backlighting.

Ideal for mobile applications, iKey's small footprint keyboards consume minimal space, leaving room for other necessary hardware and providing maximum passenger comfort. In addition, iKey's new thin profile SkinnyBoard™ keyboards can easily slide between the seat and console when not in use. Most models are available with an integrated VESA mounting pattern or magnet mount.

New mobile displays provide clarity where it's needed most. High-bright, daylight readable screens provide easy readability, even in direct sun, and can be adjusted for optimal nighttime use. The new displays are designed with safety in mind, and include an airbag-safe rubber bezel, VESA mounting pattern, and integrated touchscreen.

Mobile Solutions

IK-TR-911

- Built-in high-speed USB hubs and modular options to accommodate multiple custom configurations
- Fully sealed and resistant to dirt, dust and spills
- One-touch emergency key, integrated backlighting, and integrated touchpad
- VESA mounting pattern
- Integrated fingerprint reader (IK-TR-911-FP)

SB-87-TP-M

- Its sealed, streamlined case and silicone rubber keys meet IP65 standards, making it fully resistant to spills
- Ultra-thin design
- Red LED backlit keys and integrated touchpad
- VESA mounting pattern

BT-870-TP

- Bluetooth® & USB compatible through dual connectivity
- Built with an industrial silicone rubber keypad and a rugged ABS polycarbonate case
- Red LED backlighting
- Able to be used wired with included MicroUSB cable

SL-86-911-TP

- One-touch emergency key
- Backlit keys for low-light environments
- Mounting holes
- Integrated touchpad

IK-KV-12.1/IK-KV-13.3W

- High-bright, daylight-readable 12.1-inch flat panel display with a two-point capacitive touchscreen
- 8 to 1000 nits of brightness
- Standard VESA pattern for mounting in a vehicle
- On screen display control panel for easier component adjustment
- Also available in a 13.3-inch screen
